Re: Update on WBS Building Issues

The Department of Education and Skills sent building inspectors to Griffeen Educate Together school yesterday evening. They carried out initial site based inspections and reported the results of these findings this evening.

- The contractors (KSN) have reported that there are no internal issues causing concern
- An exclusion zone and barrier along with a protective decking will be erected around the perimeter of the school completed by Western Building Systems. This will be erected 6-10 metres from the external wall and will be the height of the school building
- All closing up works and the erection of an exclusion zone will be completed by Monday
- Further works may be carried out if deemed necessary

The school will be open to staff and students on Monday and further information will be provided when received from the Department.
